

# Easy to Install!

Our formulated surface system is a breeze – a typical plaster rig and you are on your way. We offer all of the installation equipment that you require; spray wands, slurry pumps, piston seals, foam rollers, etc., and can help you get set up with all your needs. If you're currently working with aggregate you already have everything you need.

The simple process can be broken down into the four easy steps outlined on the right.

For color consistency, we've developed a unique, scientifically proven system of combining pebble mixtures, white cement and dye packs to allow dependable results you can count on – we've taken the guesswork out of it.

**Also, ask about options for training your crew!**

**#4** Expose the aggregate by washing off top layer of plaster. You're done. Fill pool and monitor water balance.

All our StoneScapes finishes come with a limited warranty.

**Repair kits also available.**

Repair kits are premeasured using the appropriate formula to ensure color match with your original job.

**#1** Start with fully-cured new pool, or clean and prepped existing pool.

**#2** Mix the pre-measured StoneScapes pebbles, plaster and dye-packs by hand or mixer.

**#3** Apply by hand or pumping surface onto pool. Optimal coating should be at least 1/2" thick.
